MyScienceWork celebrates 10 years of accelerating research

November 17th 2020, Paris, France – MyScienceWork celebrates its 10th anniversary, marking a decade of growth and rising influence as a global research management tech provider committed to accelerating research and democratising science.

"As we celebrate 10 years, it's truly gratifying to be surrounded, even from a distance, by the many who have played a significant role in the success of MyScienceWork," said Yann Mahé, Managing Director of MSW. "The last decade has proven the company to be a greenhouse for bringing together some of the brightest and creative minds with a deep commitment to strengthening global innovation. Our longevity is a credit to the important relationships we forged over the years, the greater scientific community that has supported our cause and to our diverse, multicultural team whose dedication and commitment to excellence has propelled us forward in the industry."

Since its inauguration in 2010, MyScienceWork has had a two fold approach to accelerating innovation and opening science. With a stakeholder centric approach for developing open innovation activities, MyScienceWork fosters collaboration through openness and connectedness of all parties involved and their engagement for higher value creation. Today the company manages a comprehensive database hosting more than 90 million scientific publications and 12 million patents, and provides a suite of advanced data-driven solutions for research institutions, scientific publishers and private-sector R&D companies.

Yann Mahé added, "MyScienceWork is an important player in the research and development community. While we are experts in developing softwares and AI technologies, the company has sustained because of its deep commitment to making science more open, transparent and accessible. With reinforced focus on open science, innovation, and collaboration, leveraging scientific expertise and harnessing revolutionary technologies will be core to our mission as we move forward into the future."

About MyScienceWork

MyScienceWork is a technological company committed to accelerating research and fostering inclusivity, transparency and openness in science. MSW provides a suite of advanced data-driven solutions for research institutions, scientific publishers and private-sector R&D companies. This includes scientific communication tools and services, Sirius - an AI powered research analytics solution for governing bodies and Polaris OS - an open source, highly customisable data driven solution for digital asset management (versatile in its use as a library management system, multimedia archive, research data repository or institutional repository).
