MyScienceWork has been selected by JISC as an official supplier of research outputs repository systems

June 3rd 2020, Paris, France – Jisc, the UK's research and education not-for-profit negotiating licences and digital content agreements on behalf of UK universities, has introduced a new Dynamic Purchasing System (DPS) for the UK research sector. Within this framework, Jisc has listed MyScienceWork as one of the official suppliers of Research Outputs Repository Systems Purchasing Service with its next generation repository solution Polaris OS.

A framework to procure repository services.
Following the feedback from the UK research sector, notably the difficulties of procuring repository services, a Research Outputs Repository Systems Purchasing Service was created by Jisc Services Ltd (JSL). This Dynamic Purchasing System (DPS)
contains both new and established entrants to the Repository market enlisted following numerous financial and technical entry requirement evaluations.

Polaris OS powered by MyScienceWork is a completely new repository approach that allows users to create high-quality, robust and scalable repositories supporting complex functions with little to no programming skills. With an advanced yet predominantly user centric approach, this AI-driven digital asset management solution is a major technological breakthrough to map internal research, manage scholarly communication storage, analyze research impact, and better user experience. The Open Source solution Polaris OS is able to manage all types of research outputs in one platform.

Members of higher education purchasing consortia may obtain further information on the new Dynamic Purchasing System (DPS) from the buyer portal websites below and benefit from **sector standards compliant services** that are electronic, transparent, efficient and effective.

About MyScienceWork

Created in 2010, MyScienceWork is a technological company with a twofold approach to accelerate research, optimize funding and avoid duplication of research.
On one hand MSW is a comprehensive database hosting more than 90 million scientific publications and 12 million patents. A global scientific community uses this platform to deposit and discover scientific publications of all disciplines. On the other hand MyScienceWork provides a suite of advanced data-driven solutions for research institutions, scientific publishers and private-sector R&D companies. This includes scientific communication tools and services, Sirius - an AI powered research analytics solution for governing bodies and Polaris OS - an open source, highly customisable data driven solution for digital asset management (versatile in its use as a library management system, multimedia archive, research data repository or institutional repository).

About JISC

Jisc's vision is for the UK to be the most digitally advanced education and research nation in the world. At its heart is the super-fast national research and education network, Janet, with built-in cyber security protection. Jisc also provides technology solutions for its members (colleges, universities and research centres) and customers (public sector bodies), helps members save time and money by negotiating sector-wide deals and provides advice and practical assistance on digital technology. Jisc is funded by the UK higher and further education and research funding bodies and member institutions.
